DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 3-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over the disclosed conventional closure in view of Williams.

Applicant discloses it is known in the art to provide a closure having a cap portion, an annular sealing surface extending below the cap portion and having a part line flash thereon, the sealing surface engaging a gasket between the cap and a container opening, and an annular threaded section below the sealing surface. Applicant discloses the conventional closure does not teach a pair of annular sealing bands on the sealing surface through at least a portion of the part line flash.

Williams teaches it is known to provide a closure having at least one annular sealing band for engaging a gasket above the closure threads and between the closure and an associated container neck.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply the teaching of at least one annular sealing band to the sealing surface of the conventional known closure disclosed by applicant as taught by Williams. Doing so would correct for defects of the closure and associated container opening to provide a more reliable seal. To provide a pair of annular beads instead of only one would have been obvious to one of ordinary skill in the art at the time the invention was made, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art.

Response to Arguments

3. Applicant's arguments filed April 19, 2004 have been fully considered but they are not persuasive. Although applicant's arguments are persuasive to overcome the rejection under 35 USC 102 of anticipation, they are not persuasive to overcome the 35 USC 103 of obviousness. While the glass closure of Williams is capable of being made without a part line flash, it does teach providing a sealing band to engage a gasket between the closure and an associated container neck. Applying this teaching to the conventional closure disclosed by applicant would have been obvious for the reasons set forth above. As also seen in the to Booraem et al., it is known to provide sealing bands above a continuous sealing surface for ensuring a close fit and tight seal between the closure and an associated container neck.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Various prior art closures teaching features similar to those disclosed and/or claimed are cited for their disclosures.

7. It is called to applicant's attention that if a communication is faxed before the reply time has expired, applicant may submit the reply with a "Certificate of Facsimile" which merely asserts that the reply is being faxed on a given date. So faxed, before the period for reply has expired, the reply may be considered timely. A suggested format for a certificate follows:
